NTONYX StyleMorpher is a MIDI algorithm and transformation tool. It is a tool that allows you to create MIDI files using the original source MIDI file plus the algorithm. This tool also allows you to create new songs with different types of MIDI translations. Slug Fu slugfu is a open source framework for the Generation and Filtration of Metronomes. It allows the user to generate a huge array of metronome patterns and to test them by filtering them on the Time of day, Day of week, and the numbers of the day (to name a few). This product is primarily aimed at musicians and teachers who teach music and performers who want to generate music. It is also intended for those who want to create their own personal metronome patterns using the structure of the programming language Python. Primary Primary is a simple collaboration application for teams, makers and independent artists. You can create, edit, and manage teams and teams members using this intuitive application. Primary runs on Windows, Mac, and Linux. Primary includes a growing library of useful resources and features that make it easy for you to collaborate. Flex Music Flex Music is a simple MIDI editor, as well as an effects generator and a sequencer. It features an 8 track sequencer, with a 16 track sequencer included in the Standard Edition. It supports key, velocity and time signature based automation, as well as a MIDI Learn-style control surface. It has a simple yet powerful MIDI editor. It allows you to edit virtually any MIDI information, such as controllers, instrument names, and chords, as well as tempo and song. For loopi For loopi is a real-time MIDI generator. It is intended to provide a unique and different way of presenting midi patterns for playback on midi devices. For loopi is a real-time sound synthesizer. Any sound file is imported and altered in real-time to create unique and compelling patterns. The patterns are then played back in real-time on midi devices. For loopi features a set of special Midi chords that are usable in real-time as well. Gym Gym is a high quality fretless bass plug-in for the Apple® Mac® that provides a powerful platform for Mac users who want to make, record, and share electric and fretless bass lines. With a simple layout, you can create, record, and edit bass lines quickly and easily. When finished

What's New in the?

StyleMorpher is developed to be an easy to use and powerful MIDI tool, focused towards composers, arrangers and music fans. NTONYX StyleMorpher is intended to create many different types of transformations of MIDI-songs or fragments of songs. Thus, NTONYX StyleMorpher creates rhythm, meter, harmonic and other translations of your original MIDI source material. The principal of NTONYX StyleMorpher's work is applying an algorithm to the initial song or song fragment. The rules of this algorithm create a translation of the original work. NTONYX StyleMorpher has 6 types of transformations determined by the algorithm used. These algorithms are sensitive to the musical content of the selected MIDI file hence using the same transformation on different MIDI files will provide different results. This program allows you to create a new song using the transformations. The final resulting songs depends both upon the original source MDI file and the type of transformation selected. Thus, SM2.4 applies special algorithms to a MIDI song and creates a harmonically, rhythm, meter, etc. altered song. Installation: New users can download the trial version directly from the website: Users with no access to the Internet can get it from the download section of the website: Extract the contents of the download file to the location where you want to install the program. Changes: StyleMorpher is continuously being improved. Users may notice that the product is not as stable as we would like. In some cases there are some minor bugs that are most probably resolved by now. If you find
